

pctv for Mac HD mini Stick (80eM)

Ultra Compact, Brilliant
HDTV and 100% Digital

Overview

PCTV Systems brings an easy-to-use TV experience to Mac owners with "TV for Mac". TV for Mac HD mini Stick is an ultra-compact, USB-powered TV tuner that's the perfect match for super-slim Macbooks. The integrated signal booster improves reception sensitivity even if the signal isn't strong. You can watch, record and TimeShift your favorite programs. TV for Mac HD mini Stick is available for digital TV reception and comes with a mini remote control and high-gain telescopic antenna.

Take it with you on your travels. Record the game, grab your favorite sitcom episodes or catch the late-night thriller – TV for Mac HD mini Stick makes it happen.

Want full PVR capabilities? No problem - use Elgato EyeTV® Lite software to TimeShift, record and program all your favorite shows.

Target Market

For Mac users who are looking for an affordable portable digital TV reception solution for their computer.

Product specifications are subject to change without notice or obligation.

¹ ATSC, the new digital broadcast standard, is now available in many areas of the United States. The provided antenna will allow reception in areas where there is a good ATSC signal. In regions or rooms where the signal is not strong, an amplified rooftop antenna will be required. It is generally not possible to receive an ATSC signal while en route (e.g. in a car or train). Please consult with your local reseller or go to www.antennaweb.org for more information on areas covered and optimizing your reception.

² Unencrypted digital TV (ClearQAM) can be received with a standard cable TV connection at no additional fees. The reception of encrypted digital premium channels is not supported.
